

# DISCOVER YOUR CONCRETE'S FULL POTENTIAL

Donlar Construction has been transforming our clients' dreams from blueprint to concrete since 1972. Our field crews self-perform a wide array of work scopes, particularly concrete and specialty concrete finishes.

We have recently broadened our specialty concrete offering to include concrete polishing. Our polishing crew has been extensively trained and certified to operate our state-of-the-art dust-less polishing equipment to ensure a professional process and a high-quality finished product.

Here at Donlar Construction, we pride ourselves on giving our customers nothing but the best, and when it comes to practical flooring, polished concrete tops the list. Polished concrete offers the perfect combination of function and aesthetic, more than capable of handling whatever passes over its glossy surface.

Find out why people just like yourself have been choosing polished concrete for their new or existing facilities for decades.

Contact us and let us show you why polished concrete would be perfect for you.

## RUGGED DURABILITY

Polished concrete is exceptionally durable and it's more than capable of handling whatever life throws at it. You can feel confident knowing that your flooring investment is fully prepared to stand the tests of time.

## MODERN AESTHETIC

Concrete has never looked so good. Polished concrete gives a sleek, modern appearance, and the polishes even come in a variety of dyes. There is sure to be a color to match your vision.

## MINIMAL MAINTENANCE

Maintenance is at a minimum when it comes to polished concrete. No waxing, no scrubbing. Sweep and mop as you see fit and rest easy knowing that your polished concrete does not need to be coddled.

## FINANCIALLY SOUND FLOORING

Polished concrete is an extremely cost effective option, especially when measured throughout the duration of its life—a flooring option that won't break the bank.

## SAFETY CONSCIOUS

Polished concrete is among the most slip-resistant of hard flooring options, particularly when dry. You can walk confidently on your new concrete floors.

## HYPOALLERGENIC

Allergens have nowhere to hide on polished concrete floors, making it a practical choice for any building, particularly elementary schools or healthcare facilities.
