

## AN OVERVIEW

KFI Engineers is a recognized industry leader in process and facility infrastructure design and performance. We serve clients in the United States, Canada and Central America and have capabilities not commonly found in traditional engineering firms.

### A FRESH APPROACH

**Are you looking for a team to watch out for your best interests?** In diverse industries ranging from healthcare to education and from manufacturing to refining, our clients report they choose KFI because we are committed to speaking candidly and intelligently on their behalf. Prepared and forthright communicators who inspire confidence in all stakeholders including owners, managers, architects, construction companies and the community.

**Does your team understand what success is for you?** Managing projects end to end gives us a deep understanding of both the engineering and the business end of our work. From identifying obstacles early to designing systems that make sense for your business and actual staffing capabilities, we drive projects to a successful completion for you.

**Have you worked with a team that can balance both design fundamentals and leading edge technology?** Before LEED was part of the conversation, we were creating Minnesota's first LEED-certified workplace and have continued to refine and test new technologies there ever since. Not just the "latest and greatest," our clients enjoy fresh ideas that actually work, based on real life experience.

**Do you look forward to your next project?** Our clients tell us they enjoy working with us, not only because of the integrity of the work but because we are actually fun to be around. We intentionally select staff with strong interpersonal skills as well as exceptional technical skills.

KFI is registered and has completed projects in all 50 states, including the District of Columbia and has also worked on a variety of international projects. We have offices located in Minnesota, Wisconsin, Iowa, and North Dakota with a team of more than 100 professionals.

#### Industries we serve:

- Education
- Government
- Healthcare
- Agribusiness
- Clean Manufacturing
- Mining
- Utilities

#### Services we offer:

- Building Infrastructure
- Utility Systems Design
- Process & Chemical Engineering
- Commissioning, Recommissioning and Retrocommissioning
- Integrated Energy Modeling
- Fire Protection Design
- Controls Design
